

Assurance Dashboard Solution

Providing a single, real-time view of the assurance and compliance levels of your entire NHS IT estate

Assurance is the bedrock of evidence that gives confidence that risk is being controlled effectively or, conversely, highlights that certain controls are ineffective or there are gaps that need to be addressed. But how do you have assurance without a truthful and trustworthy view of your NHS IT estate? And how can you possibly know the true strength of your cyber posture and levels of compliance?

The ITHealth Assurance Dashboard Solution consolidates all areas of your cyber security into a single, real-time view – giving you complete, at-a-glance visibility of everything happening in your network. It increases understanding of the risks you face and levels of compliance at both a local and NHS Digital level. Most importantly, it gives you justified confidence in your assurance - at all times.

Highlights

- ▶ Consolidated view of critical security and compliance information on your entire NHS IT estate
- ▶ Simplifies CareCERT management - allows rapid assessment of associated risk and levels of compliance
- ▶ Highlights security holes at-a-glance, and ranks remediation actions in terms of priority
- ▶ Information is in near real-time - monitor the uptake of patches as they are released, as well as the impact of remediation
- ▶ Snapshot management reports provided by ITHealth allow swift and easy dissemination to the board
- ▶ ITHealth technicians are purely NHS focussed - they have an unrivalled and genuine understanding of NHS IT infrastructures

“

The amount of unexpected information that we can access from the dashboard is astounding. It has become a go-to-diagnostic tool. Now, if we're curious about anything on the network, we simply go to the dashboard and within a few clicks we get the answer.”

MIKE PRESS, Chief Technical Officer, Nottinghamshire Health Informatics Service

How does it work?

An automated asset management and network inventory tool scans and re-scans all hardware and software on the network and exposes the information in an intuitive dashboard interface. Every IP addressable asset is tracked - from workstations, servers and printers to switches, monitors and software installs - even medical devices are captured. A granular level of detail is supplied for each asset found, including: serial number, the last logged on Windows user, and remaining disk space – even devices using default passwords are identified. The data is then fed into tailored status reports so the dashboard displays only the most critical security information relevant to your NHS cyber defences and compliance in near real-time. Reports include, for example: anti-virus and windows update status, encryption status, CareCERT alert compliance levels (including the number of outstanding / resolved issues), active directory and user trends...the list goes on. As it's a managed solution, ITHealth can create and add new status reports, if requested. ITHealth also provide periodic snapshot summaries of the real-time information to feed into hygiene and/or board reports; key trends are highlighted so you can demonstrate progress over time.

Key features

- ▶ CareCERT alert management - rapidly assess associated risk levels and identify areas for remediation
- ▶ Patch management - monitor installed Windows patches and trends over time
- ▶ Hardware inventory and asset management - incl. non-Windows devices
- ▶ Software inventory and asset management
- ▶ SNMP network management - integration with switches, printers, UPSs, VMWare etc.
- ▶ Vulnerability scanning - periodic scans of new build machines ranks vulnerabilities by risk level
- ▶ Nearly all data is exportable - create actionable work lists

Benefits

- ▶ Huge time-savings through a consolidated and automated view of your entire NHS IT infrastructure
- ▶ Complete and justified confidence in your assurance and compliance levels - at all times
- ▶ Simplified CareCERT management frees up vital resource and streamlines otherwise time-consuming processes
- ▶ Monitor remediation impact in near real-time
- ▶ Regular snapshot reports allow information to be shared effectively throughout the organisation and with confidence
- ▶ ITHealth's purely NHS focussed technicians manage the whole process for you

Be assured and compliant - at all times
